

Amendments to the Claims:

1. (Original) A compact disc carrying a session including a table of contents (TOC) and a program area (PA) containing at least one track (T1), the table of contents indicating a track start position (ATOC); characterised in that:
 - a. a data portion (ED) is located at said indicated track start position (ATOC) and is arranged to cause a first compact disc reader, which uses the indicated track start position (ATOC) to determine the location of said track (T1), to fail to read the track (T1);
 - b. the track (T1) is located at an actual start position (AP) different from said indicated start position (ATOC); and
 - c. the session further includes an index (VI) arranged to be used by a second compact disc reader to determine the actual start position (AP) and to enable the second compact disc reader to read the track (T1).
2. (Original) A compact disc according to claim 1, wherein the index is a video CD index (VI) and said second compact disc reader is a video CD compatible compact disc reader.
3. (Currently amended) A compact disc according to claim 1 ~~or claim 2~~, wherein the index is located at a predetermined position within the session, such that it is recognised by the second compact disc reader.
4. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, wherein the program area includes one or more subchannels (P; IDX) arranged to cause a third compact disc reader to read the track (T1) and to ignore the data portion (ED).
5. (Original) A compact disc according to claim 4, wherein the one or more subchannels (P; IDX) are arranged to cause the third compact disc reader to ignore the index (VI).
6. (Currently amended) A compact disc according to claim 4 ~~or claim 5~~, wherein the third compact disc reader is an audio CD player, and the track (T1) is an audio track.

7. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, wherein the data portion (ED) includes unrecoverable data (UD) arranged to cause a read error in the first compact disc reader.
8. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, wherein the data portion (ED) includes a pointer (DP) to a player program executable by the first compact disc reader to play the track (T1).
9. (Original) A compact disc according to claim 8, wherein the pointer (DP) indicates a position (JF) on the compact disc at which the player program is stored.
10. (Currently amended) A compact disc according to claim 8 ~~or claim 9~~, wherein the data portion (ED) is arranged to cause the first compact disc reader to execute the player program.
11. (Currently amended) A compact disc according to ~~any one of~~ claims 8 ~~to~~ 10, wherein the player program is arranged to restrict copying of the track (T1) by the first compact disc reader.
12. (Currently amended) A compact disc according to ~~any one of~~ claims 1 ~~to~~ 7, including a boot sector (MB) arranged to cause a fourth compact disc player to execute a player program when the compact disc is loaded into the fourth compact disc player.
13. (Original) A compact disc according to claim 12, wherein the player program is arranged to restrict copying of the track (T1) by the fourth compact disc player.
14. (Currently amended) A compact disc according to claim 12 ~~or 13~~, wherein the player program is stored on the compact disc at a position (HFS) indicated by the boot sector (MB).
15. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, further including a supervisory program arranged to be executed by the first compact disc player when the compact disc is loaded therein, the supervisory program being arranged selectively to prevent access to the compact disc by the first compact disc player.
16. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, wherein the first compact disc reader is capable of copying the track (T1) to another carrier.

17. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, wherein the second compact disc reader is not capable of copying the track (T1) to another carrier.
18. (Currently amended) A compact disc according to ~~any preceding~~ claim 1, wherein the second compact disc reader is not capable of loading and executing a program from any compact disc.
19. (Original) A method of manufacturing a compact disc, including formatting source data to create a session including a table of contents (TOC) and a program area containing at least one track (T1), the table of contents indicating a track start position (ATOC); characterised in that:
 - a. a data portion (ED) is located at said indicated track start position (ATOC) and is arranged to cause a first compact disc reader, which uses the indicated track start position (ATOC) to determine the location of said track (T1), to fail to read the track (T1);
 - b. the track (T1) is located at an actual start position (AP) different from said indicated start position (ATOC); and
 - c. the session further includes an index (VI) arranged to be used by a second compact disc reader to determine the actual start position (AP) and to enable the second compact disc reader to read the track (T1).
20. (Original) A method according to claim 19, wherein the index is a video CD index (VI) and said second compact disc reader is a video CD compatible compact disc player.
21. (Currently amended) A method according to claim 19 or ~~claim~~ 20, wherein the index is located at a predetermined position within the session, such that it is recognised by the second compact disc reader.
22. (Currently amended) A method according to any one of claims 19 to 21, wherein the program area includes one or more subchannels (P; IDX) arranged to cause a third compact disc reader to play the track (T1) and to ignore the data portion (ED).

23. (Original) A method according to claim 22, wherein the one or more subchannels (P; IDX) are arranged to cause the third compact disc reader to ignore the index (VI).
24. (Currently amended) A method according to claim 22 ~~or claim 23~~, wherein the third compact disc reader is an audio CD player, and the track (T1) is an audio track.
25. (Currently amended) A method according to ~~any one of~~ claims 19 ~~to~~ 24, wherein the data portion (ED) includes unrecoverable data (UD) arranged to cause a read error in the first compact disc reader.
26. (Currently amended) A method according to ~~any one of~~ claims 19 ~~to~~ 25, wherein the data portion (ED) includes a pointer (DP) to a player program executable by the first compact disc reader to play the payload.
27. (Original) A method according to claim 26, further including recording the player program on the compact disc, wherein the pointer (DP) indicates a position (JF) on the compact disc at which the player program is recorded.
28. (Currently amended) A method according to claim 26 ~~or claim 27~~, wherein the data portion (ED) is arranged to cause the first compact disc reader to execute the player program.
29. (Currently amended) A method according to ~~any one of~~ claims 26 ~~to~~ 28, wherein the player program is arranged to restrict copying of the track (T1) by the first compact disc reader.
30. (Currently amended) A method according to ~~any one of~~ claims 19 ~~to~~ 25, including recording on the compact disc a boot sector (MB) arranged to cause a fourth compact disc player to execute a player program when the compact disc is loaded into the fourth compact disc player.
31. (Original) A method according to claim 30, wherein the player program is arranged to restrict copying of the track (T1) by the fourth compact disc player.
32. (Currently amended) A compact disc according to claim 30 ~~or 31~~, including recording the player program on the compact disc at a position (HFS) indicated by the boot sector (MB).

33. (Currently amended) A method according to ~~any one of~~ claims 19 to ~~32~~, wherein the first compact disc reader is capable of copying the track (T1) to another carrier.
34. (Currently amended) A method according to ~~any one of~~ claims 19 to ~~33~~, wherein the second compact disc reader is not capable of copying the track (T1) to another carrier.
35. (Currently amended) A method according to ~~any one of~~ claims 19 to ~~34~~, wherein the second compact disc reader is not capable of loading and executing a program.
36. (Currently amended) A method according to claims 19 to ~~35~~, wherein the compact disc is a compact disc master (M).
37. (Original) A method according to claim 36, including manufacturing one or more playable compact discs directly or indirectly from the compact disc master.
38. (Currently amended) A computer program including program steps for performing the method of ~~any one of~~ claims 19 to ~~36~~.
39. (Original) A compact disc carrying a session including a table of contents (TOC) and a program area (PA) containing at least one track (T1); characterised in that:
 - a. the session further includes an index (VI) arranged to be used by a first compact disc reader to determine the actual start position (AP) of the at least one track (T1) independently of the table of contents (TOC); and
 - b. the compact disc further carries a section (MB; ED) which causes a second compact disc reader to execute a player program when the compact disc is loaded in the second compact disc reader so as to enable the second compact disc reader to read the at least one track.
40. (Original) A method of manufacturing a compact disc, including formatting source data to create a session including a table of contents (TOC) and a program area (PA) containing at least one track (T1); characterised in that:

- a. the session further includes an index (VI) arranged to be used by a first compact disc reader to determine the actual start position (AP) of the at least one track (T1) independently of the table of contents (TOC); and in that the method further comprises:
 - b. recording on the compact disc a section (MB; ED) which causes a second compact disc reader to execute a player program when the compact disc is loaded in the second compact disc reader so as to enable the second compact disc reader to read the at least one track.

41. (Original) A compact disc carrying a player program and a single session containing a table of contents and an index separate from the table of contents, the single session being readable by a first compact disc player only by executing the player program, and by a second compact disc player by reading the index.

42. (Original) A method of manufacturing a compact disc, including recording on the compact disc a single session containing a table of contents and an index recorded separately from the table of contents, the single session being readable by a first compact disc player only by executing the player program, and by a second compact disc player by reading the index.

43. (Original) A method of restricting access to data on a removable storage medium in a removable storage device connected to a computer, comprising:

- a. intercepting a command sent by an application running on the computer for reception by the removable storage device,
- b. determining whether the command is a standard command, which can be interpreted by the device, or a non-standard command, which cannot be interpreted by the device;
- c. if the command is a standard command, preventing the command from being executed correctly, and
- d. if the command is a non-standard command, converting the command to an equivalent standard command and sending the standard command to the device.

44. (Original) The method of claim 43, wherein step c includes blocking the transmission of the standard command to the device.

45. (Original) The method of claim 43, wherein step c includes sending the standard command to the device and modifying information received in reply from the device.
46. (Currently amended) The method of any one of claims 43 to ~~45~~, wherein the command sent by the application is a standard read command.
47. (Currently amended) The method of ~~any one of~~ claims 43 to ~~46~~, wherein the removable storage medium is a compact disc or digital versatile disc.
48. (Currently amended) A computer program including program steps for performing the method of ~~any one of~~ claims 43 to ~~47~~.
49. (Original) The computer program of claim 48, recorded on the compact disc such that it is executed by the computer when the compact disc is mounted in the compact disc drive.
50. (Currently amended) A compact disc carrying the computer program of claim 48 or ~~49~~.
